

Guidance for fully vaccinated individuals

You are considered fully vaccinated 2 weeks after your final dose of COVID-19 vaccine.

Two-dose vaccines: 2 weeks after 2nd shot (you need both shots to be fully protected).

One-dose vaccine: 2 weeks after shot (you only need one shot to be fully protected).

To keep others safe until more people have a chance to get vaccinated, there may be situations where you still need to take precautions.

Once you're fully vaccinated:

You can visit indoors and in close contact with other people who are vaccinated, without worrying about getting someone sick.

You can visit with someone who is at low risk and hasn't been vaccinated yet, without wearing a mask or physical distancing.

You don't have to quarantine or get tested if you're exposed to someone who has COVID-19, unless you get symptoms after the exposure (which would be rare).
